**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 39-58, drawn to a video distribution method for delivering two portions of video related to the same video requested by a user, the video portions being stored at the server, classified in class 725, subclass 31.
  - II. Claims 59-76, drawn to a video interface arrangement and a video distribution system that stores video portions at the video interface arrangement instead of at a server, classified in class 725, subclass 134.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has separate utility such as a video distribution system that stores video portions at the server and only transmits the portions as needed, as opposed to subcombination II which has separate utility by storing the video portions at the client device and supplying the portions from the client device memory when needed. Both subcombinations are separately useable because if the server simply transmits the portions to be stored at the client device then there is no need to separately transmit the portions from the server. See MPEP § 806.05(d).

Art Unit: 2623

3. Because these inventions are distinct from the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
